

IN THE ABSTRACT:

Please add an abstract as follows:

The invention relates to a system for the automatic generation of printable files from data in a database. The system includes a printing system having at least one print processing component, the print processing component having means for the printing and/or the further processing of the files. The printing system includes a print job generation element, which is connected to a server via an interface, the server being connected to the database via an additional interface. The invention also relates to a method for the automatic generation of printable files from the data in a database, according to which the files are generated, printed and/or further processed by a printing system having at least one print processing component and a print job generation element.
